Sources, Effects and Risks of Ionizing Radiation: United Nations Scientific Committee on the Effects of Atomic Radiation 2019 Report to the General Assembly, with Scientific Annexes

Corrigendum

1. **Annex A (Evaluation of selected health effects and inference of risk due to radiation exposure), page 132, paragraph 408, line 8**

For $m_{\text{sex}}=1$, -1 for males, females, respectively

read $m_{\text{sex}} = -1, +1$ for males, females, respectively

2. **Glossary, page 297**

Low dose rate

The definition *should read*

The Committee has defined “low dose rate” as 0.1 mGy per minute or less, averaged over about one hour, for radiations such as external X-rays and gamma rays.
