Sources, Effects and Risks of Ionizing Radiation: United Nations Scientific Committee on the Effects of Atomic Radiation 2017 Report to the General Assembly, with Scientific Annexes

Corrigendum

Glossary, page 180

Low dose rate

The definition *should read*

The Committee has defined “low dose rate” as 0.1 mGy per minute or less, averaged over about one hour, for radiations such as external X-rays and gamma rays.
